

HSBC BANK (VIET NAM) LTD. CAPITAL ADEQUACY RATIO DISCLOSURE

For the six-month period ended 30 June 2021

According to Circular 41/2016/TT-NHNN dated 30 December 2016 on Capital Adequacy Ratio for banks and branches of foreign banks

STATEMENT OF HSBC BANK VIETNAM'S LEGAL REPRESENTATIVE ON CAPITAL ADEQUACY RATIO FOR THE SIX-MONTH PRERIOD ENDED 30 JUNE 2021

Title	Description	As at 30.06.2021 VND million
A	Capital = $(A1) + (A2) - (A3)$	13,439,641
A1	Tier 1	13,114,299
A2	Tier 2	325,342
A3	Deductions from capital	-
В	Risk-weighted asset = $(B1) + (B2)$	70,249,940
B1	Credit risk	69,925,505
B2	Counterparty credit risk	324,435
C	Minimum capital requirement for market risk = (C1) + (C2)	46,799
C1	Interest rate risk	46,799
C2	Foreign exchange risk	-
	Minimum capital requirement for	
D	operational risks = $[(D1) + (D2) + (D3)]/3*15\%$	835,592
D1	Business Index – 2 nd Quarter 2021	4,911,065
D2	Business Index – 2 nd Quarter 2020	5,685,501
D3	Business Index – 2 nd Quarter 2019	6,115,280
Е	Total Risk-weighted asset = (B) + 12,5*[(C) + (D)]	81,279,831
Tier 1 CAR	Tier 1 $CAR = (A1)/(E)$	16.13%
CAR	Capital Adequacy Ratio = (A)/(E)	16.54%

As at 30 June 2021, HSBC Bank Vietnam Ltd. (hereafter referred to as "HSBC Vietnam") achieves 16.54% in Capital Adequacy Ratio. Capital base is VND13,439 billion. Of which, Tier 1 capital is VND13,114 billion and Tier 2 capital is VND325 billion.

HSBC Vietnam does not have any subsidiaries, associate parties and does not incur any deduction from capital at the reporting date.

Capital Adequacy Ratio is calculated automatically by designated software system built based on Circular 41/2016/TT-NHNN dated 30 December 2016 on Capital Adequacy Ratio for banks, foreign banks branches. HSBC Viet Nam verified and ensures the data's accuracy, completeness and timeliness.

Capital Adequacy Ratio calculation process including:

- collect relevant data from data sources and departments
- process Capital Adequacy Ratio using application software
- extract reports and validate the results
- analyse Capital Adequacy Ratio, report and planning

On annual basis or when necessary, HSBC Vietnam conducts the capital planning and projection for capital adequacy ratio for the next 5 years. The capital planning and projection are based on business plan as well as the potential impact of macro economic on the Capital and Risk Weighted Assets of HSBC Vietnam in the following years. Besides, the capital plan is also carried out on the basis of fully compliance to the minimum limit regulated by State Bank of Viet Nam.

Based on the latest projection in March 2021, the projected capital adequacy ratio of HSBC Vietnam remains stable and is always higher than the minimum limit of 8% set by The SBV and the bank's risk appetite/targeted capital adequacy ratio for 5-year period from 2021 to 2025. Therefore, HSBC Viet Nam has no plan to raise chartered capital in 2022.

I hereby approve the disclosure of Capital Adequacy Ratio for the six month period ended 30 June 2021 which provides accurate information and complies with prevailing regulations.

On behalf of and Representative of HSBC Bank Vietnam Ltd.

23 August 2021

TRÁCH NHIỆM HỮU HẠN MỘT THÀNH VIÊN H\$BC

123270

Timothy Mark Redvers Evans

Legal Representative

I. CREDIT RISK

A. Qualitative aspects

1. Risk management

The Members' Council is responsible for the bank overall risk management and for approving the risk management strategies and principles through risk governance and escalation from Risk Management Committee (RMC) and Risk Management Meeting (RMM). Monitoring and controlling risk is primarily based on reporting and limits established by the Bank, overviewed by HSBC Group and regulated by the State Bank of Vietnam (SBV). Senior management assesses the appropriateness of the provision for credit losses on a quarterly basis.

The Bank follows HSBC Risk Management Framework (RMF) for the overall risk management that it takes to achieve its strategic aims. The day-to-day risk management responsibilities are delegated to individuals within the senior management team. These individuals are accountable for their assigned risks, and report and escalate as necessary through the risk governance structures. Policies, procedures and limits are defined to ensure that business activities remain within risk appetite.

All employees have a role to play in risk management. These roles are defined using the Three Lines of Defence model which is based on the activities performed. This model consists of First Line of Defence ("LOD") (Risk Owner, Control Owner and Business Risk and Control Managers), Second LOD (Risk Stewards) and Third LOD (Global Internal Audit). The model delineates management accountabilities and responsibilities for risk management and the control environment within each LOD, thereby creating a robust control environment to manage risks.

2. Credit Risk management

Credit risk is defined and controlled by HSBC Vietnam based on the well-defined credit risk management strategy. The strategy is also the solid foundation to build up the credit risk management structure, internal credit rating system, and credit risk controlling measurements.

(i) Credit risk management strategy

The strategy is defined in the Country Risk Plan (CRP) for Wholesales Banking (WSB) and in the Retail Credit Activities for Wealth and Personal Banking (WPB), which focuses on business development activity to optimize the prevailing operating model and business environment. The key business strategies are as following:

- Support business growth within credit appetite of the bank
- Achieve and maintain risk assets of high quality
- Control and management of risk, minimize credit losses while enhancing Riskadjusted returns.

(ii) Credit risk management structure

HSBC Vietnam develops the appropriate structure to manage credit risk. According to Circular 13, credit approval team was transferred to the first LOD. The lending functions are segregated:

- Credit Risk Management: Risk function is responsible for asset quality management and recovery. Risk executives have a clear modus operandi and authority, and Risk functions are staffed by personnel with loan management and recovery experience
- Relationship Management: where the credit process has become segmented for reasons of efficiency, frontline Relationship Managers should retain principal responsibilities for the effectiveness of each aspect of the management of relationships
- Credit Operations/Administration: manage security documentation, make available facilities and monitor repayment of advances.

(iii) Credit rating system

The Bank establishes and builds a Credit Risk Rating system applied on credit customers to assign internal ratings that allow consistent and accurate differentiation between high and low risk across customers and their facilities. In addition, various risk assessment tools and analytical scoring models are introduced to yield measures of PD, LGD and EAD as key drivers of credit risk management in the Group risk rating systems.

(iv) Credit risk measurements and control

Credit risks of corporate lending portfolio is strictly managed and controlled by Management team, Wholesales Market Risk (WMR), WSB and Operation Department. In periodic basis, reports, meetings and sampling check conducts to mitigate credit risks as well as launch the strategies properly. A brief about measurements for controlling of credit risks lists out as below:

- Monthly update the status of credit risk management to RMM
- Quarterly risk management committees
- Wholesale Credit Review Unit (WCRU) review
- Daily monitoring of excesses and overdue loan
- Monthly WSB EXCO
- Monthly sampling process
- Watch-Worry-Monitor (WWM) meeting
- Wholesale Banking Risk Control Management Meeting (WSB RCMM).

Vietnam is currently dealing with the fourth wave of Covid community transmissions since late April 2021. The Government has already taken strict control measures in the impacted areas. This wave has the most severe impact on the economy from the first wave till now. Both WSB and WMR are progressing to carry out portfolio health checks on a targeted basis depending on the situation as it evolves. On 02 April 2021, SBV issued Circular 03/2021/TT-NHNN amending Circular 01/2020/TT-NHNN on debt rescheduling, exemption or reduction of interest and fees, retention of debt category to assist borrowers affected by Covid-19

pandemic. HSBC built up the procedure and identified customers meeting the criteria mentioned by Circular 03. The moratorium support will be subject to clients' request and the bank's internal credit assessment. The bank will continue to closely monitor the credit portfolios to take the appropriate actions and formulate prompt solution to mitigate risks.

Retail credit risk is managed during risk management cycle which consists of six steps:

- Planning products and risk management controls
- Acquiring accounts
- Maintaining accounts and managing credit quality
- Collecting delinquencies
- Bad debt management
- Evaluating performance and refining plans and controls.

Retail credit risk management system, consisting of all internal policies, guidance, procedures and risk portfolio standard reports, ensures compliance with regulatory requirements and internal Group requirements being met. These documents provide a full overall and detailed framework, including but not limiting at Credit risk management, Credit risk appetite, Credit limit to every single customer, Credit approval delegation, Collateral assets, Lending policy and procedure to each customer segments, etc.

With the fourth wave of Covid-19, Retail Credit Risk has closely monitored new lending acquisition and portfolio management to ensure the quality of the credit portfolio. In addition, the relief program to support our customers has been revised which is in line with Circular 03/2021/TT-NHNN.

Regular monitoring of new lending applications, portfolio management and early warning indicators is undertaken by the second LOD - Risk team. Key insights and recommended management actions are reported to the RMM regularly.

For managing debt classification and provision, on quarterly basis, Risk Settlement Committee (RSC), an assistant body of the Members' Council, is organized to exercise the senior management's oversight of debt classification, provisioning, and usage of provisions against credit risks. The reporting approach and supervision are following with both Group and Local regulations issued by SBV Vietnam.

The quarter-on-quarter movement of debt classification and provisioning is presented for the Member Council approval and oversight. Responding to any early warning signal, the appropriate strategies are worked out to manage impairment amount, and specific provision in accordance to local regulatory requirement. Furthermore, exceptional reports are developed to monitor the past due loans closely as an active management of controlling any new bad debts as well as reviewing collaterals for recovery if in case. For regulatory reporting, all approved local impairments has been submitted to the SBV timely.

3. List of independent credit rating agencies used for Capital Adequacy Ratio calculation

HSBC Vietnam uses independent credit rating issued by Moody's, Fitch and Standard & Poor's to identify credit risk weight for the receivables from financial institutions.

4. Porfolio of collaterals, third-party guarantees, on-balance sheet netting and eligible credit derivatives for credit risk mitigation

HSBC Vietnam uses marginal deposit as credit risk mitigation by collaterals in Capital Adequacy ratio calculation as at 30 June 2021.

B. Quantitative aspects

1. Credit risk according to credit rating

Credit risk assets	Credit rating	Credit risk weight (%)	30.06.2021 VND million

As at 30.06.2021

	Risk weighted assets before risk mitigation	Credit risk mitigation by Collateral	Risk weighted assets affer risk mitigation
	VND million	VND million	VND Million
On Balance sheet	56,989,891	838,115	56,268,732
Off Balance sheet	14,446,239	1,195,748	13,981,208
Total	71,436,130	2,033,863	70,249,940

II. **OPERATIONAL RISK**

Qualitative aspects A.

Operational Risk Management and Policies 1.

Operational risk is the responsibility of all employees and business management, supported by the HSBC Group's Risk Management Framework (RMF). The RMF describes how the Bank manage both financial and non-financial risks across all parts of the Bank.

In order to manage Operational risks, HSBC Vietnam applies the adoption of the Three Lines of Defence risk governance model:

- 1) The First Line of Defence owns the operational risks. They are responsible for identifying, recording, reporting and managing risks, and ensuring that the right controls and assessments are in place to mitigate these risks.
- 2) The Second Line of Defence sets policy and guidelines for managing operational risk, and provides advice and guidance on effective risk management. The Second Line are risk management specialists comprising Risk Stewards and the Operational Risk Function.
- 3) The Third Line of Defence is Internal Audit who independently ensure that HSBC is managing operational risk effectively.

Identifying and assessing Operational risks and controls is in accordance with the Operational Risk Functional Instruction Manual (FIM). HSBC uses 'HSBC Helios' for the management of Operational Risk

The Risk and Control Assessment (RCA) process provides a forward-looking view of operational risk across all levels to help understand our risks and determine whether the material operational risks are controlled within acceptable levels. All RCAs are recorded in Helios, the operational risk system. HSBC implements controls to mitigate Very High and High Inherent Risks, with continuous control monitoring and then, as part of the RCA process, assess Residual Risk after these controls.

Where a risk is deemed to be inherently Very High or High, it requires a full RCA. The materiality of each risk is assessed to determine the maximum plausible impact on the business over the next 12 months and the residual risk, taking into consideration the extent to which the control environment effectively mitigates that risk.

The Local Materiality Criteria (LMC) has also been approved to support Risk Owners in identifying their Locally Significant Risks (LSR).

2. Business continuity plan

The Bank's business continuity plan is fully documented in HBVN Business Continuity Management Policy & Procedure Manual. The plan is updated regularly and tested at least once a year.

The objectives of Business Continuity Management (BCM) are:

- to minimize the impact of any unplanned disruption to the Bank's operations and associated costs of recovery;
- to effect a prioritized recovery in the shortest timeframe possible following a disaster;
- to avoid duplicated effort by management and recovery personnel in the recovery process;
- to protect customer services, revenue generation and the integrity of data and documents.

BCM addresses the worst-case scenario involving the total loss of a facility and/or denial of access to a facility. The scope of the BCM program is for all business units, departments and branches; it also covers:

- Cyber-attack on computer systems
- Physical security of premises
- The loss of more than 1 main building (both Metropolitan and Centre Point are down).

During Covid-19 pandemic, HSBC Vietnam arranged multiple Major Incident Group meetings to discuss communication to staff, customers and regulators, travel restrictions, well-being of employees and customers. We also updated a number of operational processes to improve efficiency during the period of restricted mobility. To follow Directive 16 from the government, which requires people not to move around if not necessary, HBVN implemented work from home strategy with around 90% of our team not accessing the primary offices with no impact to our operations.

B. Quantitative aspects

1. Business index

	30.06.2021 VND million
IC – Net interest and similar operation	2,558,903
SC – Total commission and fee incomes, Total commission and fee expenses, Other incomes, Other expenses	1,489,112
FC – Absolute Gains/losses from foreign currency trading, trading of trading securities and investment securities	863,050
BI – Business index	4,911,065

2. Minimum capital requirement for operational risks

	30.06.2021 VND million
BI ₂₀₂₁ – Business index 2 nd Quarter 2021	4,911,065
BI ₂₀₂₀ – Business index 2 nd Quarter 2020	5,685,501
BI ₂₀₁₉ – Business index 2 nd Quarter 2019	6,115,280
BI ₂₀₁₉₋₂₀₂₁ – Business index 2019-2021	5,570,615
Ratio	15%
Minimum capital requirement for operational risks	835,592

III. MARKET RISK

A. Qualitative aspects

1. Market Risk Management and Policies

(i) <u>Definition</u>

 Market risk is the risk of losses on financial investments caused by adverse price movements. Market risk includes: interest rate risk, foreign exchange risk, equity risk and commodity risk.

In HBVN, there are two types of market risk: foreign exchange risk and interest rates risk.

- Foreign exchange risk is the risk incurs from market volatility of foreign exchange rate, gold price whilst the Bank maintains an opened foreign exchange position or gold position.
- Interest rate risk incurs when there is interest rates fluctuation in market, impacting to valuable papers (holding securities), financial instruments, interest rate derivatives in trading book of the Bank.

(ii) The Market Risk management procedures

HBVN has established the procedures for market risk management such as:

- Group market risk management policy
- Trading/banking book discrimination policy
- Limit setting and management framework
- Documentations for market risk methodology includes: sensitivity analysis, VaR framework (including stress VaR and VaR back-testing) and stress testing.

(iii) Organizational structure

HBVN is using the Three Lines of Defense model which is based on the activities performed. This model consists of:

- First Line of Defense ("LOD"): Global Markets and Balance Sheet Management, Global Market Product Control.
- Second LOD: Wholesale Credit and Market Risk Management (Onshore), Traded Risk Management (Offshore).
- Third LOD: Internal Audit

The model delineates management accountabilities and responsibilities for risk management and the control environment within each LOD, thereby creating a robust control environment to manage risks.

(iv) Market risk measures

Currently, HBVN is measuring market risk by Standardized Measurement Method (SMM), which is followed Circular 41-2016/TT NHNN, and report market risk capital charge on monthly basic. Moreover, HBVN already applied Internal Model Approach which is applied whole Group and complied with Basel III and other international standards.

- Sensitivity Analysis is a technique to analyze the impact of the income or economic value of the financial instruments or investment portfolio that are influenced by the change of some underlying market risk factors.
- Value at risk (VaR) is a technique that estimates the potential losses on risk positions in the trading portfolio as a result of movements in market rates and prices over a specified time horizon and to a given level of confidence. Our models are predominantly based on historical simulation. VaR is calculated at a 99% confidence level for a one-day holding period rates and historical observation period of 500 days.
- Stressed VaR is a measure to assess market risk exposure of Trading Book in crisis period. In the general market VaR calculation, the sampled data is taken from the recent history.
- Back-testing: We validate daily the accuracy of our VaR models by back-testing them against both actual and hypothetical profit and loss. Hypothetical profit and loss excludes non-modelled items such as fees, commissions and revenues of intra-day transactions.
- Stress testing is a methodology to assess the potential impact of extreme market movements or crisis on Trading Book portfolio, which includes the impact on

profitability and capital adequacy. The stress scenarios should cover the factors contributing to remarkable gains or losses in the Trading Book portfolios.

(v) Exposure monitoring and control:

Maker risk exposure is managed by limit framework which is established based on Risk appetite, market condition and business strategy. These limits are allocated to Entity level, trading desks, group of products, each products, each traders and trading intention.

The limit structure is regulated on limit mandate and summarized as bellow:

Whole bank limits	- VaR
	- Stressed VaR
	- Daily/monthly/yearly maximum loss limit
Foreign exchange risk limits	- VaR
	- Stressed VaR
	- Net short position limit
	- Daily/monthly/yearly maximum loss limit
Interest rate limits	- VaR
*	- Stressed VaR
	- PVBP limit
	- Daily/monthly/yearly maximum loss limit

(vi) Risk reporting

HBVN has established the internal report system for market risk with daily, monthly, quarterly, half-year, yearly and ad-hoc reports. These reports also have been defined by target audiences. The content of market risk report includes:

- Market risk exposures
- Market risk limit, limit utilization and excess
- VaR, Stressed Var and Stress Testing
- Profit and loss from GM
- And others as requested.

2. Proprietary trade strategy

HSBC Vietnam doesn't perform proprietary trade as at 30 June 2021.

3. Trading book category

Category	Product Name
Trading book	
Bond/Bill	VND Government Treasury Notes/Bills/Bonds
Interest Swaps	VND IRS
Interest Swaps	USD IRS
Cross Currency Swaps	USDVND CSW (onshore)
Cross Currency Swaps	Non USD/VND CSW with HKH (under same cap of USD/VND CSW offshore)
Loans and deposits (internal)	Loans and deposits (internal)
FX - Spot	Spot
FX - Forward and Swap	Forward and Swap - non G7 currencies
FX - Forward and Swap	Forward and Swap - G7 currencies
FX funding swap	FX funding swap
Back-to-Back	
Back-to-Back Interest Rate Swaps	Major currencies (non-VND)
Back-to-Back bonds for 20 years	VND government bonds and corporate bonds
